El Icfes realizará cambios o revisiones periódicas a los presentes términos de uso, y los actualizará en esta publicación.

El Icfes adelantará las acciones legales pertinentes por cualquier violación a estas políticas y condiciones de uso.

* La transformación es la modificación de la obra a través de la creación de adaptaciones, traducciones, compilaciones, actualizaciones, revisiones, y, en general, cualquier modificación que de la obra se pueda realizar, generando que la nueva obra resultante se constituya en una obra derivada protegida por el derecho de autor, con la única diferencia respecto de las obras originales que aquellas requieren para su realización de la autorización expresa del autor o propietario para adaptar, traducir, compilar, etcétera. En este caso, el ICFES prohíbe la transformación de esta publicación.

• **Pregunta 8.**

En una baraja de póquer hay en total 52 cartas; 13 por cada símbolo (pica, corazón, diamante y trébol).

Se sacaron de la baraja 10 cartas con los siguientes símbolos:

Símbolo	Cantidad
	3
	2
	4
	1
Total de cartas	10

Un experto del póquer comenta acertadamente que la próxima carta que se elija al azar de la baraja tendrá aproximadamente el 28% de probabilidad de tener el símbolo trébol. El experto dedujo tal probabilidad porque

- A. ha salido solo un trébol y quedaron 12 de 42 cartas con trébol: $\frac{12}{42} \times 100\% \approx 28\%$.
- B. cualquier trébol tiene el 25% de probabilidad de salir de la baraja de 52 cartas, y aumenta un 3% cuando sale una de estas.
- C. cada trébol tiene cerca de 2,16% de salir y hay 13 cartas: $13 \times 2,16\% \approx 28\%$.
- D. de las 52 cartas han salido 10, un trébol y nueve de 3 símbolos distintos: $\frac{9}{3} = 3\%$ sumado al 25% de probabilidad de salir trébol.

• **Pregunta 22.**

La tabla muestra el costo de impresión por cada hoja en una papelería.

Precio en pesos de cada hoja impresa		
Cantidad	Blanco y negro	Color
Menos de 80 hojas	\$60	\$120
Entre 80 y 200 hojas	\$50	\$60
Más de 200 hojas	\$30	\$50

Tabla

Un cliente imprimió x hojas en blanco y negro (B/N) y z hojas en color. Si el precio que pagó se calculó usando la expresión $60x + 50z$, es correcto afirmar, sobre el número de hojas que imprimió que estas son

- A. menos de 80 en B/N y entre 80 y 200 en color
- B. menos de 80 en B/N y más de 200 en color.
- C. entre 80 y 200 en B/N y más de 200 en color.
- D. entre 80 y 200 en B/N y entre 80 y 200 en color.

• **Pregunta 31.**

Los siguientes son criterios para determinar si un número es divisible o no por 2 y por 3:

- Un número es divisible por 2 si termina en un número par.
- Un número es divisible por 3 si la suma de sus cifras es múltiplo de 3. Por ejemplo, 621 es divisible por 3 porque al sumar sus cifras ($6 + 2 + 1$), el resultado es 9, que es múltiplo de 3.

Ahora, un número es divisible por 6 si cumple las condiciones para que sea divisible por 2 y por 3. Según la información anterior, una razón correcta para determinar si 1.036 será divisible o no por 6 es:

- A. No es divisible por 6, ya que tiene dos cifras que no son pares, 1 y 3.
- B. Sí es divisible por 6, pues su última cifra es 6 y, por ende, múltiplo de 6.
- C. No es divisible por 6, porque la suma de sus cifras es 10, que no es múltiplo de 3.
